

Dear Partner,

Printers Oil Supply is dedicated to a sustainable future. We have implemented many improvements over the years and have plans to continue doing so for the foreseeable future. We also encourage other to do the same and we are always happy to talk about our experiences and to offer any advice to anyone interested in pursuing these achievements. The following list includes many of our sustainability projects that we have established:

- **Going Solar:** Posco has installed a large 50KW solar array on our warehouse that generates the majority of the power that we use.
- **Truck Fleet Reduction:** Posco has reduced our truck fleet by 50% to save fuel/miles.
- **EV Charging:** Posco has free EV charging installed and encourage employees to purchase EVs
- **VOC Reports:** Posco provides VOC reports to customers upon request and we are always happy to discuss ways to reduce VOC usage
- **Energy Efficiency Investments:** Posco has reduced power usage by installing LED lighting, Efficient appliances, and Specialty Compressors, all for energy use reduction.
- **Going Paperless:** Posco has reduced paper usage and take advantage of every opportunity we can to save paper.
- **Waste Consumption:** Posco has tremendously reduced (over 70%) our manufacturing waste generated by implementing an array of process improvements.

We look forward to expanding this list and encourage our business partners to reach out to talk about these, or other related goals.

Best Regards,

Jason Thomas
POSCO, Inc.
